

iSec Services Pvt Ltd^(TM)

Securing the Insecure...

iSec DigiSign^(TM) Version 1.0

*"Sign your electronic files...
just as you sign your paper docs"*

FEATURES

- o Generic tool to digitally sign and verify ALL kinds of files
- o Seamless integration with Windows OS
- o User-Friendly Interface
- o Authenticates sender of the file
- o Detects modifications in the file

Did you ever wish that you had a way to ...

verify whether the file that you've received is sent by an authentic person?

detect if someone has tampered with the file sent to you?

put your signatures on your files just like you sign in real life?

Well, if you did wish for those things...

iSec DigiSign^(TM) is what you have been looking for!

TECHNICAL THRUST

- * Allows users to create self-signed certificates to be used for signing
- * Gives a provision to users to select between MD5 or SHA1 hash algorithm
- * Generates public/private keys, for signing, upto 2048-bits
- * Allows the user to generate multiple certificates for convenience
